SUMMARY

Java Architect with 14+ years of experience designing and building high-availability, low-latency distributed systems and cloud-native platforms at scale. Proven expertise in architecting microservices-based systems, distributed caching, and large-scale data processing solutions on Oracle Cloud Infrastructure. Strong background in JVM internals, concurrency, and performance optimization. Experienced in leading architecture design, driving cross-team technical decisions, and mentoring engineers to deliver resilient, scalable, and secure enterprise-grade systems.

CORE SKILLS

Architecture & Systems Design: Distributed Systems, Microservices, Event-Driven Architecture, Scalability, Fault Tolerance
Backend Technologies: Java, Spring Boot, REST APIs, Kafka
Cloud & Infrastructure: Oracle Cloud Infrastructure (OCI), Docker, CI/CD (Jenkins)
Data & Performance: Distributed Caching, Performance Optimization, Query Tuning, Deadlock Debugging
Core CS Fundamentals: Data Structures & Algorithms, Multithreading, JVM Internals
Tools: JMC, JMAP, VisualVM, jcmd, JUnit, Mockito

PROFESSIONAL EXPERIENCE

Oracle India Pvt. Ltd., Bangalore

Principal Member of Technical Staff (PMTS) | Mar 2017 – Present

Oracle Analytics Cloud – BI Platform Security

- Architected a **multi-tenant, highly scalable security platform** enabling fine-grained authorization across data, services, and objects within Oracle Analytics Cloud.
- Designed and built a **cloud-native policy store service** using microservices architecture on OCI, ensuring high availability and horizontal scalability.
- Developed a **distributed caching layer for authorization data**, reducing access latency to **sub-200ms** and significantly improving system throughput.
- Implemented **memory-efficient caching strategies (LRU-based eviction)** to optimize performance under high-load conditions.

- Defined **end-to-end architecture (HLD/LLD)** including service boundaries, data flow, and integration with identity providers (LDAP, IDCS).
- Drove **cross-team architectural alignment**, influencing design decisions across multiple services.
- Mentored engineers on **distributed systems design, performance tuning, and best practices**.

Oracle BI Publisher (XMLP Server)

- Led architectural improvements for **high-volume document processing systems**, addressing memory constraints and system instability.
- Designed and implemented a **chunked processing framework**, eliminating OutOfMemory failures and enabling reliable processing of large-scale reports.
- Improved system performance and throughput through **streaming-based processing and algorithmic optimizations**.
- Owned **system design (HLD/LLD)** and contributed to platform-level performance enhancements.
- Drove **continuous performance optimization initiatives**, improving system stability in production environments.
- Contributed to engineering excellence via **design reviews, code quality improvements, and mentoring**.

Thermo Fisher Scientific, Bangalore

Senior Associate Developer | Jul 2014 – Nov 2016

Web Pricing Optimization (WPO)

- Designed and developed a **distributed data synchronization platform** integrating pricing data from **70+ ERP systems (SAP, Oracle, etc.)** into a unified system.
- Architected **data ingestion and transformation pipelines**, ensuring consistency and reliability of pricing data across systems.
- Built **RESTful services and rule engine components** for real-time price calculation and availability.
- Designed **database schemas and ETL workflows** for high-volume data processing.
- Contributed across the full lifecycle including **requirements, design, development, and production support**.

Nichepro Technologies Pvt. Ltd., Bangalore

Software Engineer | Aug 2010 – Jul 2014

- Developed enterprise applications using Java/J2EE and Spring-based frameworks.
- Worked on backend services, database design, and performance optimization.

- Gained strong foundation in **core Java, multithreading, and system design principles**.

KEY ACHIEVEMENTS

- Reduced authorization latency to **<200ms** through distributed caching architecture.
- Solved critical **OutOfMemory issues in large-scale document processing systems**, improving system reliability.
- Designed scalable systems supporting **high-throughput enterprise workloads**.
- Recognized with **team award for collaboration** and **assimilator award for rapid impact**.

CERTIFICATIONS

- Oracle Cloud Infrastructure Developer Professional
- SCJP (Sun Certified Java Programmer)
- SCWCD (J2EE Web Component Developer)

EDUCATION

MCA – RGTU Bhopal (2010)
B.Sc. (Computer Science) – Jiwaji University (2007)
