VIVEK SHARMA

+91 7676109985 | vivek.svim@gmail.com | Bangalore, India

To lead enterprise architecture and platform engineering initiatives by designing scalable, secure, and high-performance cloud-native systems, while driving microservices transformation, distributed system optimization, and advanced performance engineering to enable resilient, data-intensive platforms aligned with business growth and innovation priorities.

Core Competencies

- Enterprise Architecture & Platform Strategy
- Cloud-Native Architecture (OCI) & Distributed Systems Engineering
- Microservices & Event-Driven Architecture Design
- Multi-Tenant Platform Architecture & Security Frameworks
- High-Availability & Fault-Tolerant System Design
- Data Architecture & Large-Scale Processing Systems
- Performance Engineering & Low-Latency System Optimization
- Distributed Caching & In-Memory Data Grid Architecture
- API Ecosystems & Service Integration Architecture
- DevOps Enablement & CI/CD Architecture Governance

Technical Skills

Architecture & Systems Design: Distributed Systems, Microservices, Fault Tolerance

Backend Technologies: Java, Spring Boot, REST APIs, Kafka

Cloud & Infrastructure: OCI, Docker, CI/CD (Jenkins)

Data & Performance: Distributed Caching, Performance Optimization, Query Tuning, Deadlock Debugging

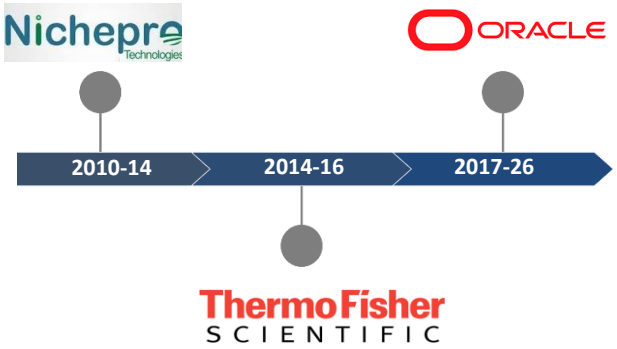
CS Fundamentals: Data Structures & Algorithms, Multithreading, JVM

Tools: JMC, JMAP, VisualVM, jcmd, JUnit, Mockito, Agentic AI

Profile Summary

- **Scalable Platform Engineering Leadership:** Driving architecture and evolution of cloud-native platforms, delivering low-latency systems tailored for analytics & data-intensive environments.
- **Secure Multi-Tenant System Design:** Establishing fine-grained authorization frameworks and multi-tenant security models, enabling controlled access across data, services & object hierarchies.
- **Cloud Ecosystem Enablement (OCI):** Leveraging OCI to build resilient, horizontally scalable services, ensuring optimized resource utilization, fault isolation, and seamless cloud adoption.
- **Service-Oriented Architecture:** Designing modular, loosely coupled service ecosystems using microservices & event-driven paradigms to enhance scalability, maintainability, and system agility.
- **Data-Intensive System Optimization:** Engineering data processing pipelines and backend systems capable of handling large-scale workloads with reliability, and performance efficiency.
- **Latency & Throughput Engineering:** Delivering performance gains through JVM tuning, concurrency models and algorithmic optimizations, ensuring sub-second response times under high-load conditions.
- **Intelligent Caching Strategies:** Designing distributed caching mechanisms with memory-efficient eviction models, improving system responsiveness and reducing backend load at scale.
- **Architecture Governance & Design Ownership:** Defining architecture blueprints (HLD/LLD), standardizing design practices, and driving alignment for scalable platform development.
- **Integration & Platform Interoperability:** Enabling seamless integration with identity providers, external systems, and APIs, ensuring secure and reliable service interoperability across ecosystems.
- **Engineering Excellence & Technical Leadership:** Elevating engineering standards through design reviews, architectural mentorship, and adoption of best practices in distributed systems, performance engineering, and platform reliability.

Career Timeline



Accomplishments

- Reduced authorization latency to **<200ms** through distributed caching architecture.
- Solved OutOfMemory issues in document processing systems, improving system reliability
- Improved reliability and uptime by **70%** through resilient architecture and fault-tolerant design.
- Reduced data processing time by **200%** via optimized data processing using chunking feature.
- Enhanced API response efficiency by **100%** through service optimization and caching strategies.

Certifications

- Oracle Cloud Infrastructure Developer Professional
- SCJP (Sun Certified Java Programmer)
- SCWCD (J2EE Web Component Developer)

Education

- **Master of Computer Applications (MCA)** | Rajiv Gandhi Technical University (RGTU), Bhopal | 2010
- **Bachelor of Science (Computer Science)** | Jiwaji University | 2007

Soft Skill

- Strategic Thinking & Decision-Making
- Analytical & Problem-Solving Skills
- Leadership & Team Development
- Attention to Detail & Process Orientation
- Adaptability & Change Management

Work Experience

Oracle India Pvt. Ltd., Bangalore | Principal Member of Technical Staff | Mar 2017 – Apr 2026

ORACLE ANALYTICS CLOUD – BI PLATFORM SECURITY

- Spearheaded architecture of a multi-tenant, cloud-native security platform enabling fine-grained authorization across data, services, and enterprise objects within Oracle Analytics Cloud.
- Designed and implemented a scalable policy management service leveraging microservices architecture on OCI, ensuring high availability and seamless horizontal scaling.
- Engineered a distributed caching framework for authorization data, achieving sub-200ms access latency and significantly enhancing platform throughput.
- Optimized memory utilization through advanced caching strategies, including LRU-based eviction mechanisms, ensuring stability under high concurrency workloads.
- Defined comprehensive architecture blueprints (HLD/LLD), covering service decomposition, data flow orchestration, and integration with enterprise identity providers such as LDAP and IDCS.
- Established architectural governance across multiple services, driving alignment and standardization of design patterns across engineering teams.

ORACLE BI PUBLISHER (XMLP SERVER)

- Led architectural transformation of high-volume document processing systems, addressing critical memory constraints and enhancing platform reliability.
- Designed and implemented a chunk-based processing framework, eliminating OutOfMemory exceptions and enabling consistent processing of large-scale reporting workloads.
- Owned end-to-end system architecture (HLD/LLD), driving platform-level improvements in performance and scalability.
- Instituted continuous performance engineering initiatives, significantly improving system resilience in production environments.
- Strengthened engineering standards through rigorous design reviews, code quality enhancements, and structured technical mentorship.

Thermo Fisher Scientific, Bangalore | Senior Associate Developer | Jul 2014 – Nov 2016

WEB PRICING OPTIMIZATION (WPO)

- Architected and developed a distributed data synchronization platform integrating pricing data from 70+ heterogeneous ERP systems into a unified enterprise platform.
- Designed robust data ingestion and transformation pipelines to ensure consistency, integrity, and reliability of pricing data across systems.
- Built scalable RESTful services and rule-engine components enabling real-time pricing computation and availability.
- Modeled and implemented database schemas along with ETL workflows to support high-volume transactional data processing.
- Delivered end-to-end ownership across the SDLC, including requirements analysis, solution design, development, and production support.

Nichepro Technologies Pvt. Ltd., Bangalore | Software Engineer | Aug 2010 – Jul 2014

- Developed enterprise-grade applications using Java/J2EE and Spring-based frameworks, supporting scalable backend architectures.
- Engineered backend services and optimized database interactions to improve application performance and responsiveness.
- Applied core Java concepts, including multithreading and system design principles, to build efficient and reliable solutions.
